Draft Profile of support to be provided by the Shared Lives (SL) Carer

Introduction

This profiling tool is intended to be used to identify and agree the level and type of support that the SL Carer will be required to provide to the individual and in turn the level of additional payment that the SL Carer should receive for these additional support services. This tool is not intended to be used to assess need but should be used after the needs assessment has been carried out, shared lives identified as the best way to meet the individual's requirements and the adult plan or support plan agreed. The profile of support needs to be met by the AP Carer will be informed by the adult/support plan.

The questions in this form are asked in the first person but the form is not a self assessment questionnaire. The form should be completed by the Shared Lives Scheme in discussion with the SL Carer and the person using the shared lives service (with support as required).

The statements in the boxes will not always be a perfect fit and the statement that is nearest to the level of support needed should be ticked without too much agonizing.
